And why not... you could open your  too!

One important thing is: **launch your Dutch language rocket!**
For that you'll need to put in some energy

A rocket uses at least 50% of all its fuel while launching...
But... once it flies, then moving forward is relatively easy.
you will need a lot less energy then

The first thing that you need to do is to **create momentum!**
When you want to launch your rocket, you'll meet resistance.

Yes... resistance can be intensive... it can be really really strong...
It often feels that something is pushing you back...
Butyou'll overcome resistance if you give your full energy and power !

...

Another way to explain is the law of the pizza
When you want to have a pizza, you need to leave it in an oven
for some time
If you take your pizza out after one minute, then put it in the oven again,
after one week then you'll never have pizza....
So if you like hot steamy Dutch, then you know what to do!

If you like to reach a whole new level, for your Dutch
then continue to walk
Do not get distracted
Do not allow interruptions
The fastest way to move up is to
do it in one row!
Don't stop, don't walk back
Go for it right now!
